

CONSULTING, TRAINING, ANALYSIS AND WASTE CHARACTERIZATION

Integral and safe solutions in the treatment and management of hazardous and non-hazardous waste .

At Hidronor we rely on the experience and national coverage in the delivery of waste management and treatment solutions, contributing value to the country's sustainable development.

We deliver specific consulting with an integral vision in the classification, analysis, characterization, manipulation, storage, treatment and final disposal. This way we offer solutions in accordance with the needs of each client.

We provide training and give technical speeches given by our executives with the purpose of informing and generating awareness about waste management, treatment and its final disposal.

Additionally, we rely on a certified, organic and inorganic laboratory accredited by the Specialized Center of Environmental Analysis of Quebec (CEAEQ) and certified under the ISO 17025.

Service

CONSULTING, TRAINING, ANALYSIS AND WASTE CHARACTERIZATION

DESCRIPTION

We rely on our lab credentials of the Specializing Center of Environmental Analysis of Quebec (CEAEQ), certified under ISO 17025, to identify waste hazardousness.

We additionally have a professional team qualified to perform the waste sampling of the land on-site.

Our laboratories allow us to determine the following parameters:

- **Hazardousness**

EPA standards, as: reactivity, corrosivity, toxicity and flammability according to current legislation.

- **Heavy Metals**

X ray fluorescence spectrometry and optical emission spectroscopy with inductively

coupled plasma, for the quantification of heavy metals.

- **PCBs**

Determining Polychlorinated Biphenyls (PCBs) compounds.

- **Organic compounds**

Analytic GC-MS technique to determine organic compounds of waste.

We provide training and technical speeches about:

- EPR Law N° 20.920.
- DS 148.
- Waste treatment, reconditioning and classification according to hazardousness.

CHARACTERISTICS

- Integral consulting services, training, analysis and characterization of waste for its safe and final disposal in accordance to the current regulations.

- Sampling service and delivery of laboratory informs.

- Qualified personnel to identify environmental risks, waste management planning and contaminated lands remediation.

- Client support in logistic management, site closure planning, waste management planning, storage and characterization.

- Training and permanent consultancy in the classification, reconditioning, transportation and final disposal.

- Delivery of laboratory informs with the analysis and characteristics of hazardousness, to determine the adequate treatment of the waste.

BENEFITS

- Permanent and reliable orientation regarding environmental standards and waste management.

- We ease our clients internal management to optimize time, costs and know-how processes.

- Guarantee the compliance of current environmental regulations.
